

Hireon AI Recruitment Platform

Bootstrapped Commercial Costing Report

Prepared For:	Client Review & Commercial Evaluation	Prepared By:	Technical Operations Team (Hireon)
Date Generated:	June 21, 2026	Exchange Rate:	1 USD = ₹84.00 INR (Fixed)
Target Budget Tiers:	₹690/mo (Extreme) & ₹3,780/mo (Standard)	Platform Domain:	AI-Powered Recruitment (SaaS)

1. Executive Summary

This commercial costing report outlines the operational budget for deploying the **Hireon AI-Powered Recruitment Platform** on a minimal, highly-efficient footprint. By leveraging cloud-native container services on Render, combined with free tiers of enterprise databases (Supabase) and serverless brokers (Upstash Redis), Hireon can be operated commercially at an extremely low initial overhead. This enables startups and recruitment agencies to establish production-grade operations with dedicated resources, zero cold starts, and commercial readiness.

Important SLA Note: Unlike Render's free tier (which suspends services after 15 minutes of inactivity, causing 50+ second "cold start" delays), the configurations detailed below utilize dedicated Starter instances. Your recruiters and candidates will experience sub-second page loads.

2. Baseline Bootstrapped Configuration (₹3,780 / Month)

This plan utilizes Render's standard Starter tier across all individual application components. It maintains separate instances for the web service, background Celery workers, database, and Redis cache.

Service Component	Provider	Configuration & Specifications	Cost (INR)
-------------------	----------	--------------------------------	------------

Backend Web Service	Render Starter	FastAPI Backend Container, 512 MB RAM, 0.5 CPU	■588 / mo
Frontend Web Service	Render Static	React Frontend, Nginx static container (global CDN)	■0 / mo
Celery Background Worker	Render Starter	Dedicated background worker container, 512 MB RAM	■588 / mo
Celery Scheduler Beat	Render Starter	Dedicated beat container, 512 MB RAM	■588 / mo
PostgreSQL Database	Render Postgres	Standard DB instance, 1 GB Storage, 512 MB RAM	■588 / mo
Redis Cache / Queue	Render Redis	Standard cache instance, 128 MB RAM	■840 / mo
API Usage / Tokens	Groq & Gemini	Pay-as-you-go allocation (~50 candidate parses/month)	■500 / mo
Transactional Emails	Resend API	Free tier (up to 3,000 emails/month, 100/day limit)	■0 / mo
TOTAL MONTHLY OPERATIONAL COST (STANDARD)			■3,780 / mo

3. Extreme Single-Instance Optimization (■690 / Month)

For clients looking to minimize upfront costs, the platform can be optimized into a single paid container. We migrate the database and Redis queue to free serverless providers, and consolidate the FastAPI server and Celery daemon into one Render instance.

Service Component	Provider	Optimization Method	Cost (INR)
Backend + Worker	Render Starter	Consolidated container running FastAPI + Celery processes	■588 / mo
React Frontend	Render Static	Static assets served via global CDN (unlimited bandwidth)	■0 / mo

PostgreSQL DB	Supabase Free	500 MB hosted database with pgvector search (does not expire)	■0 / mo
Redis Broker	Upstash Free	Serverless Redis queue (up to 10,000 commands/day)	■0 / mo
API Tokens & Outbox	OpenAI / Resend	Developer pay-as-you-go (low-volume baseline)	■102 / mo
TOTAL MONTHLY OPERATIONAL COST (OPTIMIZED)			■690 / mo

4. Core Value & AI Unit Cost Analysis

Hireon runs on a pay-per-token API structure. This means your ongoing software cost scales directly with usage. Below are the actual INR costs computed per administrative recruiter action:

- **Resume Parsing & Extraction:** ■0.152 per resume (Llama-3.3-70b).
- **Candidate Scoring (AI Alignment):** ■0.175 per candidate matching check.
- **Speech-to-Text (STT) Interview Notes:** ■1.008 per 2-minute interview audio transcription.
- **Job Description (JD) Generation:** ■0.020 per job (Gemini 1.5 Flash).
- **AI Recruiter Copilot:** ■0.013 per chat interaction turn (Llama-3.1-8b).
- **Branding Image Generation:** ■0.252 per image (FLUX.1-schnell).

5. Client Pricing & Commercial Margins

Below is the projected gross profit for Hireon under standard SaaS billing. Assuming you charge the **Starter Plan (■8,316/month)**, your gross margins remain exceptionally high:

Active Clients	Monthly Revenue	Infrastructure Cost	API & Outbox Cost	Net Profit	Gross Margin
10 Clients	■162,960	■10,584	■7,140	■145,236	89.1%
50 Clients	■814,800	■12,600	■12,600	■789,600	96.9%
100 Clients	■1,629,600	■18,480	■23,520	■1,587,600	97.4%
